- **Bhishma Kund:** Located in Narkatari, where Bhishma lay on his bed of arrows, he felt thirsty and asked for water. To fulfil his desire, Arjuna immediately shot an arrow into the ground and let loose a stream of gushing water. This is how the Bhishma Kund is believed to come into existence.
- **Sthaneshwara Mahadev Temple:** Located at Thanesar, the Pandavas prayed here before the battle and it is considered one of the holiest of places. It was an important temple even during Emperor Harsha's time.
- **Bhadrakali Temple:** Dedicated to Maa Kali and one of the 51 Shakti Peeths. It is believed that an anklet of Ma Sati fell in the well here and is venerated as a marble ankle. The Pandavas along with Lord Krishna worshipped at this temple and the Ashwamedha yagya was conducted here. Since that day, there is a tradition of offering terracotta and metal horses to the deity.
- **Raja Harsh Ka Tila:** Spread over an area of one sq km. excavations at this mound have revealed potsherds of Painted Grey Ware indicating the existence of a continuous settlement dating from the 10th century B.C. The town was visited by Hieun Tsang during the 7th century and he describes a thriving metropolis.
- **Sheikh Chilli's Tomb:** Located near Kurukshetra, the Sheikh Chilli's Tomb is a huge complex comprising, a 'madrasa', Mughal Gardens, two tombs and several other landmarks, offering glimpses from the life and times when the Mughals ruled India.
- **Kalpana Chawla Planetorium:** Kalpana Chawla Planetorium was built at the cost of 6.50 crore in memory of astronaut Kalpana Chawla, is located near Jyotisar on Pehowa road. Developed on July 24, 2007, to impart non-formal education in astronomy as covers an area of five acres of land surrounded by the lush greenery all around lending luminosity to the ambient backdrop.
- **Shrikrishna Museum:** Located adjacent to the Kurukshetra Panorama and Science Centre, Srikrishan Museum is an ideal place for those interested exploring history and Indian mythology. The museum houses a huge collection of exhibits like paintings, carvings, ancient sculpture, a walk through maze, huge statues and dioramas.
- **Chhilchhila Wildlife Sanctuary:** Spread across 28.92 hectares of land, Chhilchhila Wildlife Sanctuary is located close to Kurukshetra University here. The sanctuary has around 57 species of birds, including migratory and resident.

What was most gratifying about this visit was how well the ancient, the medieval and the ultra-modern themes are merging seamlessly at Kurushetra to ensure a highly eclectic experience for the visitor. Curiosity led us to Jyotisar- the place where the armies stood across each other and where Lord Krishna voices the Gita . A small, non-descript temple with a holy banyan tree occupies the site and it would have been just one more temple tirtha out of the 164. However, what we saw there was scintillating.

The piece de resistance is a 52 feet high bronze statue of Lord Krishna installed there. Sculpted by the famed Sh. Ram Sutar, it depicts Lord Krishna in the Viswa-Roop revealed to Arjuna on the first day of the 18 day war. Weighing a massive 33 tonnes (Bronze 26 tonnes & Stainless steel 7 tonnes), the statue stands in the middle of a beautiful landscaped area overlooking the temple imparting a surreal atmosphere to the whole setting.

But wait, the best was yet to come! We stayed back and after dusk we saw a mind boggling sound and light show designed with laser and 3D mapping . Based on the poetry of RastraKavi RamDhari Singh Dinkar, it was enough to give us the goose-pimples. All the seats were taken and the audience was spellbound. The voice of Actor Ashutosh Rana added a majesty to the lines penned by the immortal poet. Indeed one of the best shows of this kind I have ever seen. We were told by the Tourism authorities that 'ye to sirf trailer hai, main show abhi baki hai'.

Adjacent to the imposing statue of the Lord, a massive complex was under construction. Named 'Jyotisar Experiential Museum'- it will be the largest Net-Zero museum in the world promoting India's Net-Zero Vision 2070. Highly innovative Radiant Cooling and Heating system for temperature regulation will harness the sun's energy to provide thermal comfort throughout the year, ensuring a balanced interior climate. Integrated DOAS(Dedicated Outdoor Air System) with effective heat recovery would ensure fresh air circulation while conserving energy. The thermal mass of the building aids in maintaining a stable temperature, contributing to overall energy efficiency. In addition, the museum will utilize bio-gas-powered vapour absorption chillers, drawing on renewable energy sources for cooling.

The design of the Gita Museum ensures lower electricity consumption for the HVAC system annually, drastically reducing it from 1150 MWh to a mere 140 MWh. The total electricity consumption of the site is expected to be 1221 MWh, whereas the total energy produced on-site through Solar PV and wind turbines would be 1228 MWh. This configuration enables the museum to meet its peak energy needs solely with on-site renewable sources, resulting in Net-Zero energy and carbon emissions. It would be the largest net-zero building in India and the largest net zero museum in the world.

Speaking to us, Will Sevia, CEO, Urbs Systems, Sweden said "the successful adoption of this technology puts this building technologically much ahead of similar buildings in USA. India needs to adopt energy efficient technologies instead of energy guzzling technologies using air circulation. The successful implementation of this in a public building would be a game changer in the construction industry in India and the only way for India to be a world leader in addressing climate change rather than only talking about it.".

Spread over 17 acres with more than one Lakh sq. feet of covered area, the Jyotisar Experiential museum will use state of the art projection technologies, 3D projections holograms, drones to bring alive this part of our history. It will have net zero carbon emissions. No other museum in the world has done this.

Impressive indeed! We left with a sense of elation and pride after extracting a promise from the Tourism authorities of an invite on the opening day. This is our India of today!
