

MAKING A WORLD OF DIFFERENCE TO BRAND L&T

"I never knew that about L&T!!" **This could well be the refrain that you will hear from people who exit Planet L&T – the latest addition to L&T's marketing and brand promotion arsenal. Spread over 11,500 square feet in L&T's iconic A M Naik Tower in Powai, Planet L&T offers a tour de force of Larsen & Toubro's past, present and future. This technologically enabled exposition speaks volumes about the Company's continuous commitment to the nation and its needs, while sending records toppling like nine pins across its pantheon of products, projects and services. The words 'biggest, largest, heaviest, highest, tallest, longest… roll easily of the tongue when one speaks of L&T's achievements, earning the Company a reputation for being one of the country's most respected organizations across various sectors.**

Why every corporate needs an Experience Centre

Why would a conglomerate go through the trouble of putting up a swank experience centre, occupying priceless real estate, when its key customers are mostly repeat customers, who trust them implicitly? The answer lies in the reputation the brand carries on its shoulders. In the case of a Company like L&T, its brand stature helps bring in new business, day after day.

Planet L&T is more than an experience centre, it's a statement of intent. An intent to cement the Company's position as a brand that has been and is still leading the change across every sector in which it operates. A brand that has steadfastly been 'building the future' of the Company, the country and all its myriad stakeholders through technology.

Brand ambassador par excellence

Planet L&T is a live brand ambassador that has something for everyone. Walk into the cool white and blue arena and you enter a world where engineering is celebrated through its myriad applications. The exposition is divided into a dozen zones, ranging from history to current projects and futuristic businesses, innovation, sustainability and more. Leaders address you through lifelike holographic images, an immersive zone brings you face-to-face with megastructures like the Statue of Unity, and a Technology Zone allows you to deep-dive into technologies that make L&T what it is today. Most of all, it lays the entire L&T spectrum out before a visitor, inviting him or her to explore it at will – at the click of a tab.

L&T leaves its mark – on everyone

There's something for everyone to discover at Planet L&T, beginning with a mantra of safety. A visitor's audio-visual welcome includes an immersive introduction to SAFETY at L&T before s/he proceeds on their journey of discovery.

For the serious business visitor, the Panorama zone showcases specific businesses in detail, the Sustainability section focuses on the Company's commitment to the planet and the Deep Dive section showcases case studies on the use of specific technology solutions – reinforcing their belief in the Company's capabilities. Non-business visitors like Government officials, engineering students and media personnel discover new facets to L&T through 'Milestones' – an 80-plus-year saga of nation-building, One Day – a showcase of how L&T touches lives on a day-to-day basis, Giving Back – the Company's CSR story and the Future Zone – a leap of faith into new areas that will change the way we live, work and commute. Investors and key business stakeholders will discover an L&T that is ESG-focused, journeying through the spirit of innovation showcased by L&T Minds, and ending with a ticker that shows L&T's growth on its Net Zero journey.

A planet born through technology

The mantra at L&T is 'Technology for sustainable growth', and nowhere is it best exemplified than at this flagship experience centre – Planet L&T. The Covid-19 scenario in 2020-21 forced team L&T and its partners across the country to treat this like any other EPC (Engineering Procurement Construction) project. Project management skills came to the fore, spreadsheets and progress charts vied with designs and content development, thrashed out over endless virtual meetings, until a virtual shell of the Centre appeared. L&T's CEO & MD kept a hawk's eye on the project's progress – and the moment Covid restrictions were lifted, the team moved in on a war footing to execute the project.

Today, digital technologies provide an unforgettable physical experience at Planet L&T, beginning with an 8-foot wide interactive multi-media table, a 360-degree immersive zone, holographic projections and more. Whether it's a client, investor or even an L&T employee, Planet L&T leaves an indelible impression on the visitor, bringing to mind an oft-used Company tagline 'We make the things that make India proud'. Planet L&T has definitely raised the bar among corporate experience centres in the country, and is slowly but surely taking brand L&T into a new orbit.
