India's GDP is currently estimated at around USD 3.25 trillion and to achieve 5.5 trillion economies as a plan of the current government, India needed to grow on average at 9 to 10 percent per year in real terms 2020 to 2025 to achieve the target.

A stock exchange represents the performance of the companies listed on the stock exchange cumulatively, thus giving the investor an idea of the financial growth of the region. Microeconomic and macroeconomic factors, the business environment, the legal structure, and tax policies applicable to each economy impact stock market movements.

And the pipeline for future public listings is expected to remain robust over the next two year. As per the data 150 private firms could potentially list on the stock market over the next 36 months. Indian start-ups have raised $10 billion through IPOs so far this year — more money than was raised in the last three years, the investment bank said in a report dated Sept.19.

"As per data nearly US$400bn of market cap could be added from new IPOs over the next 2-3 years,".

It is explained that could drive India's aggregate stock market value to increase from $3.5 trillion currently to over $5.5 trillion by 2025. That's likely to make the South Asian country the fifth largest in the world by market capitalization, surpassing the U.K. and the Middle East.

Indian economy is one of the fastest-growing economies in the world and is expected to touch a $5.5 trillion to become the fifth largest in the world within four years, according to data. India has a very young and aspiring population with rising average income and has shown an increase in its growth rates in every decade since independence. Developed countries like Japan and USA, INDIA will also replicate the development in future powerfully.
