university is made more Indian if it can attract students from other states of the Union.

Second, the university must foster pluralism in the *teaching staff*. Like the students, these must be both women and men, who come from different classes, castes, and religious groupings. And—this is even more crucial here—from different parts of India. But—unlike in the case of students—it is not enough that the teachers come from different social backgrounds. They must also have diverse intellectual credos. Some must prefer abstract theoretical work; others, research that is more applied in nature. Since scholars are also citizens, university teachers have political beliefs; but these, again, must be of varied kinds. A university where all the teachers were Communists, or all of them Shiv Sainiks, would be a very boring place indeed.

Third, the university must offer a plurality of *disciplines*. It should have at least some—if not all—undergraduate colleges which offer degrees in the sciences as well as the humanities. There must be graduate programmes in the major disciplines—mathematics, economics, history, political science, physics, chemistry, biology, literature, etc; but also professional schools offering degrees in law, medicine, and business as well as, ideally, faculties of fine arts and music. At the same time, the university must have the flexibility—and imagination—to create new departments when scientific progress or social developments oblige it to do so.

Fourth, a university must foster a pluralism of approaches *within a discipline*. Its department of economics must have Friedmanites and Keynesians as well as Marxists. Its department of biology should have space for experimentalists who splice genes, for Darwinians who study speciation, and for fieldworkers who live with animals in the wild. A university department where all of whose members were wedded to one particular theoretical—or experimental—approach would be a very boring place indeed.
