First, learn through relationships. You can't do anything great alone and must establish long-term relationships with peers, teachers and mentors. There is a toxic myth among young people that successful CEOs, chief ministers, principals or generals are one-person armies. Life is a collective game; monumental feats require teamwork. During your academic years, you form bonds due to shared experiences. These peers will be your allies through life's highs and lows. Nurture these relationships: be kind, forgiving, and fair.

Second, challenge yourself academically. In her book *Mindset: The New Psychology of Success*, Carol Dweck differentiates between fixed and growth mindsets. The latter, which views capabilities as being malleable, is indispensable. Arguably, nurturing a growth mindset is more vital than basic literacy. George Bernard Shaw's play *Pygmalion* delved into expectation's power and was the inspiration for the film *My Fair Lady*. Winston Churchill's biography of the Duke of Marlborough is not just a historical account but offers insights into strategic alliances and mergers. Salman Rushdie's *Haroun and the Sea of Stories*, which depicts a war over a kidnapped princess, explores subjects like communication, transparency, and tolerance. To understand India's economic state, Ramchandra Guha's *India after Gandhi* is enlightening.

Fourth, remember that being cool is being different. Our definition of the word cool has changed as we have grown
