WELCOME TO THE FUTURE

THE 2023 AUTO EXPO SHOWCASED FUTURE TECH THAT WILL SOON BE A REALITY. WE TAKE A LOOK AT THE ONES THAT STOOD OUT

Photographs by **GURDEEP BHALLA**

TATA SIERRA EV

The Tata Sierra is making a comeback in the form of an electric vehicle. The new Sierra is based on the Gen2 Tata EV platform that spawns other cars from the brand's portfolio. It not being a dedicated EV platform, we can guess that the Sierra will be seen in an ICE avatar too. Now that will make things rather interesting. The new Sierra is a ravishing-looking vehicle and what we loved is that the original silhouette remains. The front end looks far sleeker with signature DRLs running through and through. Being an EV, the grille is negated and the headlamp consoles sit atop the bumper. The rear end also boasts of a smooth design with an end-to-end tail light unit.

LIGER X+

Liger Mobility showcased its electric scooter Liger X+ that comes with a self-balancing feature that allows it to stay upright while stationary and while on the move at low speeds, without any physical part touching the ground except the two wheels. There are lean angle sensors which deploy the gyroscope situated underneath the seat to counter the lean angle; hence keeping the scooter upright.

LEXUS LF-Z ELECTRIFIED

Incorporating Lexus' Tazuna concept, the LF-Z Electrified uses AI to learn the driver's preferences and behaviour to personalise audio playback, navigation and drive mode
