in poor health

The gender gap in India, shown in the WEF report, was also visible in the National Family Health Survey report published earlier this year. This report revealed how women fared poorly in health indicators while showing improvement in other indicators. In fact, anaemia and obesity have increased among them in the last five years. What's more worrying is the regional disparity among states in terms of performance across all indicators.

HEALTH

Sex ratio improves but anaemia, obesity and diseases hit women

SEX RATIO OF THE TOTAL POPULATION (FEMALES PER 1,000 MALES)

2019-21	1,020
2015-16	991
