AND OF BRAVE BUNDELAS

> The Prime Minister laid the foundation stone of Bundelkhand Expressway in Chitrakoot district in February 2020. Immediately after this the whole world faces the challenge of corona pandemic. It is very important that despite this, four lane (expendable to 6 lane) Bundelkhand Expressway was inaugurated within 28 months.

land acquisition process daily. The obstacles coming in the way of acquisition were fixed with coordination with different departments. That is the reason that the land required for Bundelkhand Expressway was arranged without any legal issue. The farmers of this drought hit region also got economic benefit by giving their land for the Bundelkhand Expressway project. The compensation of the farmers which was four times of the circle rate was sent directly into their accounts through real time gross settlement RTGS. Pancham Kumar, a resident of mavai village in Banda district is one among such farmers. Pancham got a compensation at the rate of 28 lakh per bigha of his 16 bigha of non-cultivated land. Pancham says that after getting the amount as compensation he immediately purchased another 20 bigha land near his village. He is also constructing 17 shops and a guest house near the road.

Bundelkhand Expressway has many features. The main road on one side of this four lane Expressway is 7.5 Meters wide. A 3 meter wide paved shoulder is there on both sides of the main road. In this way the total width of one side of the road is 11.25 Meters. Both sides are separated with a 5.5 Meter wide median. To improve the quality of the road of this Expressway, crumb rubber modified bitumen has been used instead of regular bitumen. Apart from the rubber polymer mixed bitumen has also been used at some places. Rubber and polymer doesn't allow the water to stay on the road and it not only increases the life of the road but also avoids skidding of vehicles. The use of new techniques in construction of the Expressway have also reduced the total cost. Similar to Purvanchal Expressway, beehive-like 'Jio cells' made of plastic have been constructed on the slopes of both sides of the road on Bundelkhand Expressway. Jio cells have been used as slope protection at the places where Expressway is 6 meters or above higher than the ground. Use of Rock boulders not only increases the cost, but there is a threat of theft also.

MAKING THE WAY EASY FOR BUNDELKHAND

- **Bundelkhand expressway green field project starts from bharatkoop area in Chitrakoot district near Jhansi-Prayagraj National Highway- 35 and ends at kudrael village of Etawah district at Agra Lucknow Expressway.**
- **The total length of Bundelkhand Expressway is 296.07 km and it passes through Chitrakoot Banda Mahoba Hamirpur Jalaun Auraiya and Etawah districts. The Expressway crosses bagain Shyama chandrawal birma Yamuna betwa and Singur rivers.**
- **The Bundelkhand Expressway crosses 64 villages of Jalaun district, 37 villages of Auraiya district 29 of Hamirpur 28 of Banda 9 of Chitrakoot 8 of Mahoba and 7 villages of Etawah district.**
- **With an estimated cost of 14849.09 crore rupees, Bundelkhand Expressway is constructed under engineering procurement construction model.**
- **The four lane Bundelkhand Expressway is expendable to 6 lane and all its structures are made according to 6 lane. A 3.75 meter service lane is there for connecting the people living along this Expressway.**
- **4 railway overbridges, 14 major bridges, 6 toll plaza, 7 Ramp plaza, 286 minor bridges, 19 flyovers and 224 underpasses have been constructed on this Expressway.**
- **The Expressway will remain connected with Yamuna Expressway and through National and state highways it will remain connected with Lucknow, Delhi Kanpur Agra Aligarh Mathura Vrindavan Noida and greater Noida along with the Reewa district of Madhya Pradesh.**
- **One can easily reach from Chitrakoot to Delhi in just 6 hours through Bundelkhand Expressway, Agra Lucknow Expressway and Yamuna Expressway. The Expressway also has an automatic traffic management system.**
- **All bridges on this Expressway on the rivers including Yamuna and betwa have been constructed with segmental Girder launching technique in record 18 to 20 months. Keeping in mind the water transport system there is 60 meter of distance between the two pillars of the bridge made on Yamuna river.**
