

AN EXPRESSWAY WITH SEVERAL SPECIALITIES

Special provisions have been made in Bundelkhand Expressway to minimise the damage in road accidents. There are Metal Beam Crash Barriers on both sides of the road. In case any vehicle rams into them, it will not go on the other side. a 25 millimeter wide strip of thermoplastic paint will also be there on both sides of the roads on the Expressway. This special strip will alert the driver by making loud sounds in case the vehicle goes to the extreme corner of the road. This will alert the driver and the vehicle will not strike with the corners. To make the journey interesting and also to alert the driver, there is a turn on this Expressway at every three kilometre interval. The big challenge in front of the Yogi government was the quality of this construction. For this a hightech concrete lab was established in all 6 packages of bundelkhand expressway. Every construction material was tested for quality and strength in these labs before use.

To check the quality of the expressway, UPEIDA maintained a 4 layered system. The quality of the material being used in construction was tested in the lab of the construction agency, the lab of the authority engineer consultant and then in the UPEIDA project implementation lab.

The third-party checkup of whole construction work is being conducted by international agency 'Rites'.

Special arrangements have been made for rainwater harvesting on this Expressway which passes through the drought prone region of Bundelkhand. Provision for the rainwater harvesting

EXPRESSWAY WILL BECOME CATALYST FOR DEVELOPMENT

- With the construction of this Expressway, the Bundelkhand region has been connected with the easy and fast travel corridor through Expressway Agra Lucknow Expressway and Yamuna Expressway.
- Bundelkhand Expressway will open Vista of overall development of the region. This Expressway is access controlled and it will not only reduce the fuel consumption but will also be able to control the pollution.
- The regions covered under this project will develop socially and economically and the expressway will also give impetus to agriculture, commercial, tourism and industries sectors.
- This Expressway will become instrumental in connecting different production units, development centres and agriculture production regions to the National capital in the form of an industrial corridor.
- Many opportunities for establishing industrial training institutes, educational and training institutions and medical institutions will be able to develop along with the Expressway.
- Expressway will work as a catalyst for establishing handloom industries, food processing units, cold storage and industries based on milk.
