chance of the disease at some stage in life. Roche Diagnostics' Navify tool can provide doctors with algorithms for the detection of cancer in the breasts and lungs. "In cancer care," says Thilo Brenner, the Swiss multinational's Asia-Pacific sub-regional head for India, Pakistan, Myanmar, Indonesia and the Philippines, "the first step towards precision medicine is accurate diagnostics, for which using AI can be beneficial. Image analysis algorithms can impact patient care by increasing the information available to pathologists and enhancing diagnostic confidence." The MNC also has a healthcare digital centre in Pune that focuses on using advanced technology and data analytics to provide data-driven insights and diagnostics. Then there's the Bengaluru-based start-up Predible, which has developed a software, LungIQ, which uses CT scan data to help predict early lung cancers, COPD (chronic pulmonary obstructive disorder) and interstitial lung disease.

A variety of hospitals, such as Medanta and Apollo, as well as independent clinics like Nura, Dr Dangs Labs, MedGenome and MapMyGenome,

WHERE DO YOU GET TESTED

DR DANGS LAB

Tests offered: Allergy testing. Data is fed into AI-powered machines that can accurately detect potential vulnerabilities to 163 common allergens, based on the analysis of 300 components of various allergens

Cost: ₹25,000 (approx.)

NURA

Tests offered: Gender-specific screening and genetic diagnostics, the results of which are analysed by AI to make predictions about future health concerns

Cost: ₹18,000 (for prediction through blood work/body scans) plus ₹15,000 (for genetic testing)

MEDANTA

Tests offered: Blood work and body scans that can help predict the risk of heart disease, diabetes, respiratory ailments, bone ailments and liver disease. They have developed their own algorithm

Cost: Price on enquiry

MEDGENOME

Tests offered: Over 1,300 types of genetic tests, which can find markers for all common lifestyle diseases and cancers. Can also find markers in couples to predict the health of their yet-unborn child

Cost: ₹3,000–7,000, depending upon the package

MAPMYGENOME

Tests offered: A 'Genomepatri' test that maps your risk for over 100 types of diseases and health issues

Cost: ₹8,000

APOLLO HOSPITALS

Tests offered: Proactive health package, which starts with an AI-enabled personalised health risk assessment. This uses data on lifestyle, history, blood work and scans to predict potential risks

Cost: Price on enquiry
