# WHICH CITY IS GOOD FOR WHICH COURSE?

NO. OF COLLEGES STREAMWISE AMONG THE TOP 30 IN EVERY STREAM

classroom to re-energise classical modes of teaching and help teachers and students strive for better learning outcomes.

While necessity is the mother of that reform, a long-overdue change in the college admission process came this May as a considered decision. This July, colleges under 89 universities, including all central ones, will admit students into their undergraduate and post-graduate courses based on their performance in CUET, a Common University Entrance Test. To be conducted by the National Testing Agency, this examination is expected to evaluate the conceptual learning of students and their ability to think logically. "Without a sound knowledge and understanding—not memorised answers—of what is taught in schools, a student cannot expect to do well in CUET," says Professor M. Jagadesh Kumar, chairman, University Grants Commission.

This means that the unrealistic cut-offs for admission in colleges, particularly in Delhi University, will be a thing of the past. With the method of marking varying across boards, children in state boards often fare worse than their counterparts in other boards. CUET will provide a level playing field. Students across India, irrespective of their performance in the 10+2 board exam, can aspire for admission to their desired course in prestigious colleges. In this changed scenario, the 26th India Today Best Colleges Survey, conducted by reputed market research agency Marketing and Development Research Associates (MDRA), assumes added significance.

For over two decades, this survey has been recognised as the last word in the evaluation of the country's colleges.
