ity supply has not been able to match demand. This has led to many parts of the country facing power shortages during peak demand.

Under the Union Budget 2022-23, the Centre announced the issuance of sovereign green bonds for funding green infrastructure, as well as conferring infrastructure status to energy storage systems, including grid-scale battery storage systems. In the same budget, Rs 19,500 crore was allocated for a PLI (production-linked incentive) scheme to boost the manufacturing of high-efficiency solar modules. Allowing 100 per cent Foreign Direct Investment (FDI) in the power sector has raised inflow in the sector. Schemes such as Deen Dayal Upadhyaya Gram Jyoti Yojana and Integrated Power Development Scheme are expected to augment electrification across the country. ■
