Dedicated Freight Corridors (DFC) is one of the most ambitious rail infrastructure projects undertaken by the Government of India. Two corridors - the Eastern Dedicated Freight Corridor (EDFC) of 1,875 route km (including Sonnagar - Dankuni section of 538 km on PPP mode) and the Western Dedicated Freight Corridor (WDFC) of 1,506 route km are being constructed in the first phase.

While the Indian logistics sector has a 14.4 percent contribution to the country's Gross Domestic Product (GDP), it incurs a cost of 14 percent of the GDP against the global average of approximately 8 percent. Logistics need to be improved to address this gap, and DFCCIL is poised to play a crucial role in achieving this milestone. DFCCIL is going to be instrumental in increasing the modal share of Indian Railways.

The complete DFC network is Level Crossing free ensuring safety and expeditious movement of trains. 304 Road Over Bridges and 557 Road Under Bridges are being constructed to achieve this. Massive land acquisition of 10,619 Ha has been done.

STATUS

Currently, 1352 km, or 47% of the DFC has been completed. The organisation is confident of finishing 90% of the work on DFCs by June 2023. This includes 100% of the work on the EDFC and all the work in the WDFC barring a small stretch in Maharashtra.

OPERATIONS & BUSINESS DEVELOPMENT

Over 43,500 trains have plied across the DFC and over 36.30 billion Gross Ton Kilometre (GTKM) and 14.86 billion Net Ton Kilometre (NTKM) freight has been transported. There's a daily movement of 160-170 trains. The Trucks on Train (TOT) service on the Rewari-Palanpur section of WDFC has provided a cost-effective, expeditious and environment friendly service for freight transportation on the WDFC.

DFCCIL has embarked on its freight operations journey by encouraging development of Private Freight Terminals (PFTs) / Multi Modal Logistics Parks (MMLPs) through private investment. DFCCIL has awarded 14 locations for development of PFTs through Tender process.

DFCCIL has approved Rail Connectivity projects as per Gati Shakti Freight policy at 17 Greenfield/ Brownfield locations. They include Private Freight Terminals (PFTs) at 8 locations, Private Sidings at 8 locations) and Port Rail terminal at one location. Two terminals of CONCOR namely Kathuwas and Swarupganj are functional now and 3 Cement sidings at New Bangurgram, New Banas and New Keshavganj are also functional and loading rakes on a regular basis.

With the advent of DFC, the states along its entire alignment benefit from quicker and easily accessible freight connectivity which helps move raw materials and finished products quickly. The movement of coal from the eastern part of India to the power plants in the North have contributed towards maintaining a seamless power supply to customers and industries.

"DFCCIL, with its expanding reach, is operating faster, heavier, higher and longer trains with continuous IT-enabled monitoring for enhanced reliability to support India's need for energy efficient and environment friendly transportation for sustainable development."

Sh Ravindra Kumar Jain
MD DFCCIL
