The Maharashtra government's tardy pace of land acquisition has delayed India's first high-speed 'bullet train' between Mumbai and Ahmedabad by at least six years

By Kiran D. Tare

25 KM Total length of tunnels

9 KM Total length of bridges

13 KM Total length of cut/ fill

260 KM/HOUR Speed of the bullet train in the tunnel

320 KM/HOUR Speed of the bullet train on the elevated tracks

3 No. of tunnel boring machines required to dig the tunnels. It will be the first time that three TBMs will work in tandem, at one spot at the same time. The company that wins the tender will have to purchase a TBM first

5 YEARS Time for completion once work begins. It will be the only bullet train tunnel in the world to have two separate tracks for up and down movement

₹1.08 LAKH CRORE Original project cost, which may have gone up due to the delays. The project was launched in 2017 and was supposed to be up and running by 2023

₹20,000 CRORE Funds to be provided by Centre and the governments of Maharashtra and Gujarat on a 50:25:25 basis. Rest of the funds are to come from JAICA (Japan International Cooperation Agency)

₹5,000 CRORE Maharashtra's share in the project over which it has raised objections, saying the bullet train will help Gujarat more than the state. CM Uddhav Thackeray calls the project a "white elephant"

₹3,000 CRORE Cost of a 0.96 ha. plot of land in BKC, earmarked for the bullet train terminus. Maharashtra is negotiating with the railways, says either the latter pays the state government for the land or deducts the amount from the Rs 5,000 crore that is Maharashtra's share
