> The only objective of establishing Delhi Skill and Entrepreneurship University is to ensure every student of this University who wants a job, gets it, and those who want to do business are equipped with practical knowledge to start it right after their graduation.

ARVIND KEJRIWAL
Chief Minister, Delhi

DELHI SKILL AND ENTREPRENEURSHIP UNIVERSITY

DELHI GOVERNMENT'S INTERVENTION GAINS TRACTION AMONG YOUTH AND INDUSTRY

Why are crores of Indians not able to find meaningful employment? Why is India's labour force participation decreasing, instead of increasing in the last few years? Despite being the fastest-growing economy in the world, why is the country unable to engage its youth properly?

While there are many factors that have contributed to the current situation, it's hard to look beyond the obvious skill-set gap between college education and the demand of the industry.

According to India Skills Report 2022, only 48% of the youth of India is employable. Even though the effects of this mismatch are visible later in life, the problem begins at the level of school. A general lack of focus on experiential learning from school days continuing to college lends its hand to future years of underachievement and underperformance.

While India loves its youth to become engineers and doctors, most of them are not fit to become a part of the workforce upon graduation. According to the 'National Employability Report for Engineers 2019', a staggering 80% of Indian engineers are unfit for jobs in the knowledge economy. It is a common practice for IT giants like TCS, Infosys and Wipro to hire candidates from college campuses and then train them extensively for 3-6 months to learn skills relevant to their job profiles. Recently, Sudha Murty (Chairperson, Infosys Foundation) too said that the quality of education in India needs improvement.

The Indian education system, in general, is driven by focussing greatly on the theoretical aspects of education. While that helps students gain conceptual clarity and understanding, it leaves them short of any actual skills that could help them excel in the real world. In many courses, there is little or no space for practical exposure. Even the courses that do offer practical components, often do not prioritise it enough. The majority of the 40,000+ colleges in India are teaching students from outdated books and materials. In the last three decades, there has been a huge transformation in several aspects, whether it be in the field of science, engineering and arts. However, all this knowledge is yet to reflect in the syllabi of the majority of higher education institutes in India.

> Our University is working with the vision of creating courses that will make our students job-ready the moment they leave college. We get to hear from the industry that they are not finding people that are employable and then we see many educated youths who are not getting jobs. Realizing that our teaching institutions are not preparing these students for the real world, we have created courses focusing on practical learning by involving the industry leaders and experts in an integral way. Because of this, employers are now recognizing DSEU's efforts in bridging the skill gap in the market.

Professor Neharika Vohra,
Vice-Chancellor, DSEU
