

Practical learning

All the courses of DSEU have a hands-on approach that encourages a practice-based learning environment for the students. The semester-end exams only have a weightage of around 25-30% in most of the courses.

"One big thing that we are aiming for is how to increase the expertise and growth of an 8th or 12th standard dropout. Can we use what we know, as experts in our field, and facilitate the growth of that individual to the level of a usual college graduate? This is one of the reasons why our University does not have an age cap. We have a 50-year-old studying in one of our courses and we are happy to teach her" said Prof. Vohra, VC DSEU.

"For example, in the course on Retail management, a student comes to college for 3 days and then goes to a retail store for 3 days as part of the job training," Prof. Pattnaik, Pro-Vice Chancellor said.

The undergraduate courses will have the entire last year as internships. In other courses as well, efforts have been made to include industry components in every semester. Over 40 MoUs and partnerships with leading giants of the industry such as Reliance, Starbucks, Infosys, TCS and Bluestar have been signed to give as much practical exposure to students as possible. The focus is on creating the temperament of an opportunity creator, someone who enjoys doing things in a new or different way. The focal point of the University is to help final year students get their business up and running before their course ends. Similarly, courses such as B.A. Aesthetics and Beauty Therapy allow one to gain specialised skills in make-up, hair design, inner well-being, knowledge of eco-sensitive products and cosmetics. The practical knowledge, similarly, in all courses of the University lay a strong foundation for the employment of these individuals.

INDUSTRY LEARNING AND PRE-PLACEMENT SUPPORT

Avenues for **On the job training** with major companies

40+ MoUs with major Industry partners like **Reliance, TCS, BlueStar**

25+ Expert **talk sessions** held

Conducted **400+ mock interviews**, career counselling sessions

Focus on **improving communication skills**

How does DSEU design its courses?

The University did deep market research by focusing on various job portals to understand what jobs are available in the market, the skills required to do those jobs and the time period in which they get filled.

"So our course is different not just in terms of the curriculum but also in terms of the entire course development process. Normally, what courses require is discussed academically and then included in it. However, we went out to the industry and understood what kind of skill gap is there in the market," said Prof. Pattnaik, Pro-Vice Chancellor.

The University then reached out to representatives from third-party hiring companies to understand their pain points. *"This helped us zero in on the sectors and areas in which we needed to focus. Once we did that, we went to the industry leaders and experts. We asked for their input. In the end, we decided to include them formally in the curriculum design process. We created a combined curriculum advisory team of industry leaders and academicians in equal proportion to develop the course curriculum."* Prof Vohra, VC DSEU said.

Equal importance has been given to ensuring that the courses are accessible to a wide section of Delhi's population. From Merit-cum-need scholarships for diploma and undergraduate courses to Stepping Stone Scholarship, Raman Kant Munjal scholarship and more, the University and its partners provide nearly 10 types of scholarships for different needs.

While admissions to PG programs are underway, admissions to diploma, certificate courses and undergraduate programs will be beginning soon.
