Statement 2: INCORRECT—Relative humidity is greater over the oceans and least over the continents. Absolute humidity is greater over oceans because of greater availability of water for evaporation.

49. **Specific Humidity:** It is expressed as the weight of water vapour per unit weight of air. Since it is measured in units of weight (usually grams per kilogram), the specific humidity is not affected by changes in pressure or temperature. Absolute Humidity and Relative Humidity are variable whereas Specific Humidity is a constant.
50. **Statement 1: CORRECT**—For the formation of dew, it is necessary that the dew point is above the freezing point.
    Statement 2: CORRECT—When the moisture is deposited in the form of water droplets on cooler surfaces of solid such as stones, grass blades and plant leaves, it is known as dew.
    The ideal conditions for its formation are clear sky, calm air, high relative humidity, and cold and long nights.
51. According to their height, expanse, density and transparency or opaqueness clouds are grouped under four types: (i) cirrus; (ii) cumulus; (iii) stratus; (iv) nimbus.
    Low clouds: Stratus, cumulus, nimbostratus, cumulonimbus, stratocumulus Middle clouds: Altostratus, altocumulus High clouds: Cirrus, cirrostratus, cirrocumulus
52. Smog = smoke + fog (smoky fog) caused by the burning of large amounts of coal, vehicular emission and industrial fumes (Primary pollutants).
    Smog contains soot particulates like smoke, sulphur dioxide, nitrogen dioxide and other components.
    At least two distinct types of smog are recognised: sulfurous smog and photochemical smog. Sulfurous smog results from a high concentration of SULFUR OXIDES in the air. Photochemical smog occurs most prominently in urban areas that have large numbers of automobiles where Nitrogen oxides are the primary emissions.
53. **Statement 1: CORRECT—Convectional Rainfall:**
    The, air on being heated, becomes light and rises up in convection currents. As it rises, it expands and loses heat and consequently, condensation takes place and cumulous clouds are formed. This
