effect of ENSO, resulting in increased Monsoon rains in several ENSO years like the 1983, 1994 and 1997.

97. **Statement 1: INCORRECT**—Positive IOD (Arabian Sea warmer than Bay of Bengal) results in more cyclones than usual in Arabian Sea.

Statement 2: INCORRECT—Negative IOD results in stronger than usual cyclone genesis (Formation of Tropical Cyclones) in Bay of Bengal. Cyclone genesis in Arabian Sea is suppressed.

98. **Statement 1: INCORRECT**—El Niño Modoki is associated with strong anomalous warming in the central tropical Pacific and cooling in the eastern and western tropical Pacific

Statement 2: INCORRECT—The El Niño Modoki phenomenon is characterised by the anomalously warm central equatorial Pacific flanked by anomalously cool regions in both west and east.

Such zonal gradients result in anomalous two-cell Walker Circulation over the tropical Pacific, with a wet region in the central Pacific.

Statement 3: INCORRECT—Rainfall anomalies are negative over the southern peninsular India and positive over the central parts of India during El Niño Modoki years. Detailed analysis suggests that the El Niño Modoki modulates Indian Summer Monsoon rainfall by inducing changes in the western north Pacific (WNP) low-level circulation.

99. **Statement 1: CORRECT**—The diurnal range of temperature is small, and so is the annual range.

Statement 2: CORRECT—There are two periods of maximum rainfall, April and October. [shortly after the equinox]. Least rain fall occurs in June and December [solstice].

The *double rainfall peaks coinciding with the equinoxes* are a characteristic feature of equatorial climates not found in any other type of climate.

Statement 3: CORRECT—In the Amazon lowlands, the forest is so dense that it is called ‘selvas’. [selvas: A dense tropical rainforest usually having a cloud cover (dense canopy).]

100. **Statement 1: CORRECT**—Entirely confined to the western portion of continental masses, between 30° and 45° north and south of the equator. The basic cause of this type of climate is the
