- Warm ocean currents bring rain to coastal areas and even interiors. Example: Summer Rainfall in British Type climate.

Moderating effect

- They are responsible for moderate temperatures at coasts. [North Atlantic Drift brings warmness to England. Canary cold current brings cooling effect to Spain, Portugal etc.]

Fishing

- Mixing of cold and warm ocean currents bear richest fishing grounds in the world.

Drizzle

- Mixing of cold and warm ocean currents create foggy weather where precipitation occurs in the form of drizzle [Newfoundland].

Tropical cyclones

- They pile up warm waters in tropics and this warm water is the major force behind tropical cyclones.

Navigation

- Currents are referred to by their “drift”. Usually, the currents are strongest near the surface and may attain speeds over five knots.
