centrifugal force causes tidal bulge on the other side.

Statement 2: INCORRECT—The 'tide-generating' force is the difference between these two forces; i. e., the gravitational attraction of the moon and the centrifugal force.

24. Statement 1: INCORRECT—
    - The in and out movement of water into a gulf through a channel called a tidal current. Tidal bore is a type of Tidal current bot not every tidal current is a tidal bore.
    - When a tide enters the narrow and shallow estuary of a river, the front of the tidal wave appears to be vertical owing to the piling up of water of the river against the tidal wave and the friction of the river bed.
    - The steep-nosed tide crest looks like a vertical wall of-water rushing upstream and is known as a tidal bore.

    Statement 2: CORRECT—The favourable conditions for tidal bore include strength of the incoming tidal wave, slim and depth of the channel and the river flow.

25. Ideal Conditions for Coral Growth
    - Stable climatic conditions: Corals are highly susceptible to quick changes. They grow in regions where climate is significantly stable for a long period of time.
    - Perpetually warm waters: Corals thrive in tropical waters [30°N and 30°S latitudes, The temperature of water is around 20°C] where diurnal and annual temperature ranges are very narrow.
    - Shallow water: Coral require fairly good amount of sunlight to survive. The ideal depths for coral growth are 45 m to 55 m below sea surface, where there is abundant sunlight available.
    - Clear salt water: Clear salt water is suitable for coral growth, while both fresh water and highly saline water are harmful.
    - Abundant Plankton: Adequate supply of oxygen and microscopic marine food, called plankton [phytoplankton], is essential for growth. As the plankton is more abundant on the seaward side, corals grow rapidly on the seaward side.
    - Little or no pollution: Corals are highly fragile and are vulnerable to climate change and pollution and even a minute increase in marine pollution can be catastrophic.
