26. Statement 1: CORRECT—Most of the ocean trenches are found in the eastern and western parts of the Pacific Ocean and they are seldom found in the middle ocean region.
    Statement 2: CORRECT—Most of the trenches are curved, convex side facing the open ocean, because of the geometry of plate interactions on the spherical earth.
27. Statement 1: CORRECT—Romanche Gap divides the Mid Atlantic Ridge into two parts. This is located near the equator. To the north of this gap is the North Mid Atlantic Ridge and to the south is the South Mid Atlantic Ridge.
    Statement 2: INCORRECT—Canyons facing the river mouths are usually long but have gentle gradient. Canyons located near islands are quite deep.
28. Statement 1: CORRECT—Wyevale Thomson Ridge lies between British Isles and Ireland.
    Statement 2: CORRECT—Walvis Ridge lies to the west of the western coast of Africa in the South Atlantic Ocean.
29. Statement 1: INCORRECT—Lake Van has the highest salinity in the world.
    Statement 2: INCORRECT—Gulf of Mexico records some of the highest salinity(36ppm) in the world.
30. Statement 1: INCORRECT—Imager current is a branch of North Atlantic current.
    Statement 2: CORRECT—Mozambique current is a branch of Auglhas current.

Difficulty Level: Tough

31. Statement 1: INCORRECT—The continental slope boundary indicates the end of the continents.
    Statement 2: CORRECT—*Continental shelves are potential sites for economic minerals.* Twenty percent of the world production of petroleum and gas comes from shelves. Polymetallic nodules (manganese nodules; concentric layers of iron and manganese hydroxides) etc., are good sources of various mineral ores like manganese, iron copper, gold, etc.
