(a) Expanding the biodiversity of existing system by constructing wildlife bridges, corridors between habitats.
(b) Using advanced technologies like genetic engineering to multiply species that are at risk of extinction.
(c) Encouraging trade in wildlife and other natural products of economic importance without harming the diversity and richness of biomes.
(d) Exploring molecular, genetic and species- level diversity of nations to derive products of economic importance.

21. Which of the following are characteristics of a stable community?
1. Annual productivity of the community is nearly stable
2. Resistant or resilient to occasional natural and anthropogenic disturbances
3. Resistant to invasion by alien species. Choose the correct option using the codes below:
(a) 1, 2 and 3 only
(b) 1 and 2 only
(c) 2 and 3 only
(d) 1 and 3 only

22. In ecological terms, which of the following is extreme opposite state of endemic state of a species?
(a) State of Extinction
(b) State of Preservation
(c) State of cosmopolitan distribution
(d) None

23. Which of the following is the foundation species in Kelp forest?
(a) Zooxanthella
(b) Grass and plants
(c) Macroalgae
(d) Corals

24. Which of the following are distinguished biogeographic regions of India?
1. Trans-Himalaya
2. Desert
3. Semi-arid
4. Eastern Ghats
5. Gangetic Plains
