components of the ecosystem in a more or less circular fashion. This circular fashion is known as biogeochemical cycling (bio for living; geo for atmosphere).

13. There is an inexhaustible supply of nitrogen in the atmosphere, but the elemental form cannot be used directly by most of the living organisms. Nitrogen needs to be 'fixed', that is, converted to ammonia, nitrites or nitrates, before it can be taken up by plants. Nitrogen fixation on earth is accomplished in three different ways:
    - By microorganisms (bacteria and blue-green algae),
    - By man using industrial processes (fertiliser factories) and
    - To a limited extent by atmospheric phenomena such as thunder and lighting.

14. Tropical Deciduous Biome is also called as Monsoon Climate
    - Tropical Monsoon Forests are also known as a drought-deciduous forest; dry forest; dry-deciduous forest; tropical deciduous forest.
    - Teak, neem, bamboos, sal, shisham, sandalwood, khair, mulberry are some of the important species.
15. Aquatic organisms' classification from surface to the bottom in that order:
    - Neuston: These organisms live at the air-water interface, e.g., floating plants.
