21. A stable community means that there is not much variation in productivity from year to year; it is either resistant or resilient to occasional disturbances (natural or human-made) and is resistant to invasions by alien species.
22.
    - Endemism is the ecological state of a species being unique to a defined geographic location, such as an island, nation, country or other defined zone, or habitat type; organisms that are indigenous to a place are not endemic to it if they are also found elsewhere.
    - An animal or plant may be endemic to a zone, a state or a country. The extreme opposite of endemism is cosmopolitan distribution means presence of that species is not limited to a region but is globally distributed.
23. Foundation species is a dominant primary producer in an ecosystem both in terms of abundance and influence.
    Macroalgae, as the primary producer which meets most of the energy requirement of the ecosystem, is the foundation species in kelp forest.
24.
    - Biogeography deals with the geographical distribution of plants and animals.
    - Biogeographic zones were used as a basis for planning wildlife protected areas in India.
    - There are ten biogeographic zones which are distinguished clearly in India. They are as follows:
    1. Trans-Himalayas
    2. Himalayas
    3. Desert
    4. Semi-arid
    5. Western Ghats
    6. Deccan Peninsula
    7. Gangetic plain
    8. North-east India
    9. Islands
    10. Coasts
25. Himalayan foothills:
