- A flagship species is a species chosen to represent an environmental cause, such as an ecosystem in need of conservation.
- These species are chosen for their vulnerability, attractiveness or distinctiveness in order to engender support and acknowledgement from the public at large while keystone species is defined by it's ability to alter its habitat significantly. All flagship species need not be keystone species and vice versa. But there is some overlapping. And flagship species may vary based on national, political and political priorities but keystone species is strictly biological and environmental.
- Many endemic species if endangered may be identified as flagships but not necessarily. For example, Giant Panda and Yangtze Dolphin both endemic to China and are endangered but Panda campaign the flag role while later is not much talked about.

58.

- Biogeographic realms are large spatial regions within which ecosystems share a broadly similar biota.
- A realm is a continent or sub-continent sized area with unifying features of geography and fauna & flora.
- The Indian region is composed of two realms. They are:
  1. The Himalayan region represented by Palearctic Realm.
  2. The rest of the sub-continent represented by Malayan Realm.
- Biome means the main groups of plants and animals living in areas of certain climate patterns.
- It includes the way in which animals, vegetation and soil interact together. The plants and animals of that area have adapted to that environment.
- The five biomes of India are:
  1. Tropical Humid Forests
  2. Tropical Dry or Deciduous Forests (including Monsoon Forests)
  3. Warm deserts and semi-deserts
  4. Coniferous forests
  5. Alpine meadows
