- Nitrification: Takes up Ammonium in soil and converts into nitrates in soil. Does not release nitrogen into atmosphere.
- Ammonification: Takes up ammonium in soil and converts into nitrites in soil.

30.

- At high doses, nuclear radiation is lethal, but at lower doses, it creates various disorders, the most frequent of all being cancer.
- Continued small dose exposure to nuclear radiation can cause childhood leukaemia, miscarriage, underweight babies, infant deaths, increased susceptibility to AIDS and other immune disorders.
