- River Volga is Europe’s longest river. Danube is second longest.
- Originating in Germany, the Danube flows southeast for 2850 km, passing through or bordering Austria, Slovakia, Hungary, Croatia, Serbia, Romania, Bulgaria, Moldova and Ukraine before draining into the Black Sea. Its drainage basin extends into nine more countries. It forms delta on Romanian Black Sea coast.

27.

- Far southern Europe has a Mediterranean climate, which features warmer to hot summers, less annual rainfall, and frequent sunny skies.
- The climate of western Europe is strongly conditioned by the Gulf Stream, which keeps mild air (for the latitude) over North-western Europe in the winter months, especially in Ireland, the UK and coastal Norway.

28.

- Sun would never be directly above on any part of European continent as position of sun varies between Tropics and Europe is completely out of Tropics.
- The province of Almería in Andalusia, southern Spain, is the driest region of Europe and home to the only desert climate on the continent.
