2. Mainland North America is shaped roughly like a triangle, with its base in the north and its apex in the south; associated with the continent is Greenland, the largest island in the world.
3. Baffin Bay exists between Canada and Greenland.
4. Death Valley in California, at 282 feet (86 metres) below sea level, is its lowest.
5. The rift subsequently moved to the east of Greenland, forming the Reykjanes Ridge that now separates the North American plate from the European plate.
6.

1. Canada is second largest country in the world in area (after Russia).
2. The 49°N latitude forms the boundary between the two big countries-USA and Canada.
3. Mt. Mackenzie is the highest peak of North America, situated in Alaska. It is an active volcano.
7. Saint Lawrence River flows into Atlantic Ocean.
8. Mount McKinley (also known as Denali) is the highest mountain on the North American continent. Its summit is 20,237 feet (6168 meters) above sea level. It is located in the USA, in the state of Alaska.
9. Lake Superior is the largest fresh water lake in the world.
10. In North America temperate grasslands are called prairies. Major grasslands in North America are the Great Plains of the Midwest, The Palouse Prairie of eastern Washington State, and other grasslands in the southwest.
11. The Brookings effect is a katabatic wind that affects the southern coast of Oregon.
    Studies have shown that the north-to-south orientation of the Chetco River mouth and the town of Brookings plays a large role in the high temperatures recorded, and the reason the effect is localised. During most of the year, a sea breeze sets up along the coastline with prevailing surface winds from the northwest.
12. **North Atlantic Ocean**: *Atlantic hurricane*
    This region includes the North Atlantic Ocean, the Caribbean Sea, and the Gulf of Mexico. Tropical cyclone formation here varies widely from year to year, ranging from one to over 25 per year.
