these now produce mainly high-quality goods. Mass production is now more economic, farther south.

24. **Eastern Texas:**
    The industrial development of this region is based on oil, as a source of fuel and as a raw material. The main centres of this region are cities of Dallas and Houston. This region is also rich in sulphur, rock salt and phosphate rock. This makes oil refining and chemical industries the most important in the region. Their situations on the coast have additional advantage of transportation.
    The capital available by the oil industry helps in industrial development. Dallas has more than 12 oil refineries, chemical plants, synthetic rubber factory as well as steel milling and manufacture of mining equipment and consumer products. Dallas also has clothing and fashion industry and Fort Worth is famous for aircraft and aerospace industries.
25. Bay of Pigs is in Cuba.

Difficulty Level: Medium

26. To the northeast Greenland is separated from Iceland by the Denmark Strait, and to the northwest Alaska is separated from the Asian mainland by the much narrower Bering Strait. North America's only land connection with South America is at the narrow Isthmus of Panama.
27. The portions of the orogenic belts next to the continental interior are composed mainly of folded sedimentary rocks indigenous to North America. The parts closer to the modern oceans are more diverse and include rock masses that originated outside the continent. A striking observation from paleogeographic reconstructions is that the present-day ocean basins opened along lines near the lines of closure of the preceding Paleozoic oceans.
28.
