3. In the middle of the Atlantic Ocean, the North American Plate borders the Eurasian Plate. The two plates move apart from each other at this divergent boundary. As they pull apart, the mantle material beneath rises to create new crust on the ocean floor. The continually rising mantle material created the Mid-Atlantic Ridge, an underwater chain of mountains.

39.

- *Chinook* (warm dry westerly off the Rocky Mountains)
- *Diablo* (hot, dry, offshore wind from the northeast in the San Francisco bay)
- *The Hawk* (cold winter wind in Chicago)

40. The eastern, wetter half is a major corn and soybean producing region known as the Corn Belt, while the western, drier half is known as the Wheat Belt for its high rate of wheat production. The Central Valley of California, produces fruits, vegetables, and nuts, and is known as the Salad Bowl. The American South has historically been a large producer of cotton, tobacco, and rice, but it has declined in agricultural production over the past century.

41. Statement 1: CORRECT—The mechanisation of farming and intensive farming have been major themes in US. history, including John Deere's steel plow, Cyrus McCormick's mechanical reaper, Eli Whitney's cotton gin, and the widespread success of the Fordson tractor and the combine harvester. Modern agriculture in the US ranges from hobby farms and small-scale producers to large commercial farms covering thousands of acres of cropland or rangeland.

    Statement 2: CORRECT—Although agricultural activity occurs in every state in the union, it is particularly concentrated in the Great Plains, a vast expanse of flat, arable land in the center of the nation in the region west of the Great Lakes and east of the Rocky Mountains.

42. Temperate cyclones are associated with blizzards in North America and western disturbances in India. They are usually distributed over USA, Canada, belt extending from Iceland to Barents Sea continuing over Russia and Siberia, Mediterranean basin extending even up to India in winters. Thus, in a way temperate cyclones play an important role in global heat transfer.
