77. Which of the following phenomenon can be better understood by using 'Continental Drift Theory' and 'Sea Floor Spreading Theory'?
    1. Plate Tectonics
    2. Formation of mid-oceanic ridges
    3. Origins of Earthquake
    4. Formation of fold mountains

    Choose the correct combination using the codes given below:
    (a) 1, 2 and 3 only
    (b) 1, 2 only
    (c) 1,3 and 4 only
    (d) 1, 2, 3 and 4

78. Consider the following statements regarding plate tectonics:
    1. San Andreas Fault is a continental transform fault which forms the tectonic boundary between the Pacific Plate and the North American Plate.
    2. Nazca Plate has no transform boundary with any other neighbouring plate.

    Which of the statement(s) above is/are incorrect? Answer using codes mentioned below:
    (a) 1 only
    (b) 2 only
    (c) Both 1 and 2
    (d) Neither 1 nor 2

79. Consider the following statements regarding plate tectonics:
    1. Two main sources of heat within Earth are nuclear fusion and residual heat.
    2. Fold and block mountains, mid-oceanic ridges, trenches, volcanism, earthquakes etc. are a direct consequence of interaction between various lithospheric plates.

    Which of the statement(s) above is/are incorrect? Answer using codes mentioned below.
    (a) 1 only
    (b) 2 only
    (c) Both 1 and 2
    (d) Neither 1 nor 2

80. *Assertion(A):* Himalayas are fold mountains located on the boundary of Indo-Australian plate interaction with Eurasian Plate.
