semiprecious stones, including diamonds.
2. Bauxite reserves are present in Guian highlands.
3. Colombia is famous for its emeralds, found primarily in the Muzo mines of the Cordillera Oriental.

49. Limestone is quarried in Ecuador, Brazil, Chile, Argentina, and Colombia, while Uruguay and Colombia are significant producers of marble. Brazil has the continent's only significant deposits of graphite.
50. The Yanomami are the largest relatively isolated tribe in South America. They live in the rainforests and mountains of northern Brazil and southern Venezuela.

Andes

- Andean Hunting-Collecting Tradition, Argentina, 11, 000 to 4000 CE.
- Awa-Kwaiker, northern Ecuador, southern Colombia.
- Aymara, Bolivia, Chile, Peru.
- Cañari, Ecuador.
- Capulí culture, Ecuador, 800 to1500 CE.
- Cerro Narrio (Chaullabamba) (Precolumbia culture)
- Chachapoyas, Amazonas, Peru.
- Chachilla (Cayapas)

Difficulty Level: Tough

51. Three principal factors control the features of South America's climate. The first and most important of them are the subtropical high-pressure air masses over the South Atlantic and South Pacific oceans and their seasonal shifts in position, which determine both large-scale patterns of wind circulation and the location of the rain-bearing intertropical convergence zone (ITCZ). The second is the presence of cold ocean currents along the continent's western side, which affect both air temperatures and precipitation along the Pacific coast; on the Atlantic coast, warm currents are predominant. Finally, the orographic barrier of the Andes produces a vast rain shadow over much of the southern tier of the continent.
