3. During the warmer half of the year in southern Australia (November to April), the subtropical ridge is generally located to the south of the continent.
4. High pressure systems generally move eastwards along the ridge.

Select the correct option:

(a) 1,2,3
(b) 2,3,4
(c) 1,3,4
(d) 1,2,3,4

71. Which of the following are correct regarding Trade winds?
    1. The strength of the Trade Winds has an effect upon the rainfall across northern Australia.
    2. The Trade Winds are the east to southeasterly winds which blow across much of the southern hemisphere tropics, affecting tropical to subtropical areas of Australia.
    3. They are associated with enhanced rainfall to tropical and sub-tropical areas of the east coast.
    4. The Trade Winds are strongest during the winter months.

    Select the correct option:

    (a) 1,2,3
    (b) 2,3,4
    (c) 1,3,4
    (d) 1,2,3,4

72. Which of the following are correct?
    1. Tropical depressions may bring heavy rainfall to affected parts of northern Australia.
    2. Tropical depressions are associated with occasional thunderstorms, fresh to strong and gusty winds and heavy rain, often leading to flooding of affected areas.
    3. Tropical cyclones affect all of northern Australia, with the northwest of Western Australia between Broome and Exmouth being the most cyclone prone part of Australia's coastline.
    4. The Australian cyclone season officially runs from April to November.

    Select the correct option:

    (a) 1,2,3
