50. **Statement 1: INCORRECT—Positive IOD phase:**
Westerly winds weaken along the equator allowing warm water to shift towards Africa. Changes in the winds also allow cool water to rise up from the deep ocean in the east. This sets up a temperature difference across the tropical Indian Ocean with cooler than normal water in the east and warmer than normal water in the west. Generally this means there is less moisture than normal in the atmosphere to the northwest of Australia. This changes the path of weather systems coming from Australia's west, often resulting in less rainfall and higher than normal temperatures over parts of Australia during winter and spring.
Statement 2: INCORRECT—Negative IOD phase:
Westerly winds intensify along the equator, allowing warmer waters to concentrate near Australia. This sets up a temperature difference across the tropical Indian Ocean, with warmer than normal water in the east and cooler than normal water in the west. A negative IOD typically results in above-average winter-spring rainfall over parts of southern Australia as the warmer waters off northwest Australia provide more available moisture to weather systems crossing the country.

Difficulty Level: Tough

51. The biggest seaports in Australia:
- Seaport of Brisbane - currently it is the third busiest port in Australia and the fastest growing container port.
- Seaport of Fremantle
- Seaport of Melbourne
- Seaport of Sydney

52.
