

53. The largest area of oldest rocks is the Western Shield, comprising the western half of the continent, which has been eroded to a low relief. The youngest rocks are found in the growing fold belt of the Banda arcs and in New Guinea at the boundary between the Indian-Australian plate and the Eurasian and Pacific plates. The modern fold belts are separated from Australia by a “moat” (the Timor Trough) and a wide shelf (the Timor and Arafura seas).

54.

1. In the eastern part of Australia a high land is found which runs parallel to the coast. This chain of very high plateaus is called Great Dividing Range.
2. Downs-Grassland in Australia is called as ‘Parkland of Australia.
