After giving rain on the windward side, when these winds reach the other slope, they descend, and their temperature rises. Then their capacity to take in moisture increases and hence, these leeward slopes remain rainless and dry. The area situated on the leeward side, which gets less rainfall is known as the *rain-shadow area.* It is also known as the *relief rain.*

7. Mediterranean climate occurs around Mediterranean sea, along the west coast of continents in subtropical latitudes between 30°-40° latitudes e.g. - Central California, Central Chile, along the coast in south eastern and south western Australia.

   Mediterranean climate is a dry summer climate characterised by dry summers and mild, wet winters. The climate receives its name from the Mediterranean Basin, where this climate type is most common. Mediterranean climate zones are typically located along the western sides of continents, between roughly 30 and 45 degrees north and south of the equator. The main cause of Mediterranean, or dry summer climate, is the subtropical ridge which extends northwards during the summer and migrates south during the winter due to increasing north-south temperature differences.

   Areas with this climate are where the so-called “Mediterranean trinity” of agricultural products have traditionally developed: wheat, vine and olive.

8. The primary GHGs of concern today are carbon dioxide (CO_2), Chlorofluorocarbons (CFCs), methane (CH_4), nitrous oxide (N_2O) and ozone (O_3). Some other gases such as nitric oxide (NO) and carbon monoxide (CO) easily react with GHGs and affect their concentration in the atmosphere.
9. The continental shelf is the extended margin of each continent occupied by relatively shallow seas and gulfs. It is the shallowest part of the ocean showing an average gradient of 1° or even less. The shelf typically ends at a very steep slope, called the shelf break.
10. There are some countries which are situated in the tropical region; they possess a large number of the world’s species diversity. They are called *mega diversity centres.* There are 12 such countries, namely Mexico, Columbia, Ecuador, Peru, Brazil,
