18. Statement I: CORRECT—Patterns of population distribution and density help us to understand the demographic characteristics of any area. The term population distribution refers to the way people are spaced over the earth's surface. Broadly, 90% of the world population lives in about 10% of its land area.
    Statement II: INCORRECT—The 10 most populous countries of the world contribute about 60% of the world's population. Of these ten countries, six are located in Asia. Identify these six countries of Asia.
19. Statement I: CORRECT—
    Density of Population = Population/Area For example, area of Region X is 100 sq km and the population is 1, 50,000 persons. The density of population is calculated as:
    Density = 1, 50,000/100 = 1,500 person/sq km.
    Statement II: CORRECT—Asia has the highest density of population.
20. Statement I: CORRECT—Growth of Population: Change of population in particular area between two points of time is known as growth of population. For example, if we deduct the population of India 2001 (102.70 crore) from population of 2011 (121.02 crore) then we shall get the growth of population (18.15 crores) in actual numbers.
    Growth Rate of Population: This is the change of population expressed in percentage.
    Statement II: CORRECT—Natural Growth of Population: This is the population increased by difference between births and deaths in a particular region between two points of time.
    Natural Growth = Births - Deaths
    Actual Growth of Population: This is Births - Deaths + In Migration - Out Migration.
21. Statement I: CORRECT—Areas with mineral deposits attract industries. Mining and industrial activities generate employment. So, skilled and semi-skilled workers move to these areas and make them densely populated. Katanga Zambia copper belt in Africa is one such good example.
    Statement II: CORRECT—Cities offer better employment opportunities, educational and medical facilities, and better means
