productivity of the economy and, increased fiscal space created by the demographic dividend to divert resources from spending on children to investing in physical and human infrastructure.

Rise in women's workforce that naturally accompanies a decline in fertility, and which can be a new source of growth. Increase in savings rate, as the working age also happens to be the prime period for saving. A massive shift towards a middle-class society, that is, the rise of aspirational class.

Statement II: CORRECT—Demographic dividend has historically contributed up to 15% of the overall growth in advanced economies. Japan was among the first major economies to experience rapid growth because of changing population structure. The country's demographic-dividend phase lasted from 1964 to 2004.

Difficulty Level: Tough

31. Statement I: CORRECT—Population density is the number of people living in a unit area of the earth's surface. It is normally expressed as per square km. The average density of population in the whole world is 51 persons per square km.

    Statement II: CORRECT—South Central Asia has the highest density of population followed by East and South East Asia. The population change refers to change in the number of people during a specific time. The world population has not been stable. This is actually due to changes in the number of births and deaths. For an extremely long period of human history, until the 1800s, the world's population grew steadily but slowly.

32. Statement I: CORRECT—Births are usually measured using the birth rate, i.e., the number of live births per 1000 people. Deaths are usually measured using the death rate, i.e., the number of deaths per 1000 people. Migrations is the movement of people in and out of an area.

    Statement II: CORRECT—Births and deaths are the natural causes of population change. The difference between the birth rate and the death rate of a country is called the natural growth
