density of population and level of development vary between rural and urban areas.

The criteria for differentiating rural and urban population varies from country to country. In general terms rural areas are those where people are engaged in primary activities and urban areas are those when majority of the working population is engaged in non-primary activities.

13. Statement I: CORRECT—Proportion of literate population of a country in an indicator of its socioeconomic development as it reveals the standard of living, social status of females, availability of educational facilities and policies of government.
Statement II: CORRECT—Level of economic development is both a cause and consequence of literacy. In India - literacy rate denotes the percentage of population above 7 years of age, who is able to read, write and have the ability to do arithmetic calculations with understanding.
Statement II: CORRECT—The working population (i.e. women and men of the age group - 15 to 59) take part in various occupations ranging from agriculture, forestry, fishing, manufacturing construction, commercial transport, services, communication and other unclassified services.
14. Statement I: CORRECT—Both growth and development refer to changes over a period of time. The difference is that growth is quantitative and value neutral. It may have a positive or a negative sign. This means that the change may be either positive (showing an increase) or negative (indicating a decrease).
Statement II: CORRECT—Development means a qualitative change which is always value positive. This means that development cannot take place unless there is an increment or addition to the existing conditions. Development occurs when positive growth takes place. Yet, positive growth does not always lead to development. Development occurs when there is a positive change in quality.
15. Statement I: CORRECT—Population growth is determined by the annual growth rate, which is calculated in percent per annum. Like, if there is an increase of 2 people per 100 people of the population, then the annual growth rate would be 2%.
