landforms all along the boundary form a chain of volcanic islands which are collectively called as Island Arcs.

31. Lake Tanganyika is an African Great Lake. It is the second-oldest freshwater lake in the world, the second largest by volume, and the second deepest, in all cases after Lake Baikal in Siberia. It is the world's longest freshwater lake. The lake is shared between four countries - Tanzania, the Democratic Republic of the Congo (DRC), Burundi, and Zambia.

32. A dissected plateau forms as a result of upward movement in the Earth's crust.

The uplift is caused by the slow collision of tectonic plates. In case of Tibetan Plateau, the uplift it caused by collision of Indian Plate with Eurasian Plate.

Difficulty Level: Medium

33.

- Orogeny is a mountain building process whereas epeirogeny is continental building process.
- Epeirogenic or continent forming movements act along the radius of the earth; therefore, they are also called radial movements. Their direction may be towards (subsidence) or away (uplift) from the center. The results of such movements may be clearly defined in the relief. Orogenic or the mountain-forming
