1. The water resource situation in India is rapidly worsening, and it is likely to become severe during coming decades. Per capita availability of water is low, and the water is of poor quality.
2. Irrigation is the major user of water, accounting for more than four-fifths of the total used water.

Answer through the codes:

(a) Only 1 correct
(b) Only 2 correct
(c) Both are wrong
(d) Both are correct

60. Consider the following statements regarding irrigation in India:
    1. Indian agriculture is particularly fragile as it continues to depend on monsoon rains. A significant shift in the magnitude of rains, or its timing, or its spread across the subcontinent is capable of disrupting production and supplies.
    2. Irregular or heavy monsoons may cause floods in agricultural fields for hundreds of miles along riverbanks. Much of the water runs off without being harvested or put to any use and causes heavy loss of life and economic resources.

    Answer using the correct codes:

    (a) Only 1 correct
    (b) Only 2 correct
    (c) Both are correct
    (d) Both are wrong

61. Choose the correct statement/statements:
    1. India will be required to produce more and more from less and less land and water resources.
    2. In India, water availability per capita was over 5000 cubic metres (m^3) per annum in 1950.

    Answer through the codes:

    (a) Only 1 correct
    (b) Only 2 correct
    (c) Both are correct
    (d) Both are wrong

62. Consider the following statements:
    1. Most poor people in India live in rural areas. They belong to socially weaker sections and have few or no assets. They work
