conditions of farmers, as well as small farm sizes. In India traditional agriculture is still dominant as many farmers depend on livestock in crop production, for manure as fertilizers, and the use animal powered ploughs. According to 2011 statistics, the average farm in India is about 1.5 acres, minuscule when compared the average of 50 hectares in France and or 178 hectares in United States and 273 hectares in Canada.

37. Statement I: CORRECT—Crop insurance is provided to farmers under the Pradhan Mantri Fasal Bima Yojana (PMFBY). The scheme covers all farmers, including tenant farmers and sharecroppers, who are growing notified crops in notified areas. In 2019-20, the scheme has been allocated ' 14,000 crore, an 8% increase over the 2018-19 revised estimate. Issues related to crop insurance raised over the years are: Statement II: CORRECT—The Economic Survey 2017-18 noted that the share of agricultural households insuring their crops was low. Less than five per cent of the agricultural households cultivating major crops, such as rice and wheat, insured them. Lack of awareness about crop insurance among farmers was the major factor for not insuring their crops. Further, lack of awareness about availability of crop insurance programmes was another reason.

38. Statement I: CORRECT—As of 2014-15, 49% of the country's net sown area was under irrigation. The remaining agricultural area in the country depends on rainfall. Major irrigation sources for agriculture include tubewells (46%) and other wells (17%), and canals (24%). Sources such as canals and tubewells use the flood irrigation technique, where water is allowed to flow in the field and seep into the soil. This results in wastage of water since excess water seeps into the soil or flows off the surface without being utilised. It has been recommended that farmers move from flood irrigation to micro irrigation (drip or sprinkler irrigation systems) in order to conserve water.

Statement II: CORRECT—The Pradhan Mantri Krishi Sinchai Yojana was launched in 2015 to increase the coverage of irrigated area. The Ministry implements the 'Per Drop More Crop' component under the scheme to increase water efficiency through micro irrigation and other interventions. In 2019-20, Rs 3,500
