four or more lane highways of international quality standards, but without access control (entry/ exit control), they are not called as expressways but simply as highways.

Statement II: CORRECT—As per the National Highways Authority of India, about 65% of freight and 80% passenger traffic is carried by the roads. The National Highways carry about 40% of total road traffic, though only about 2% of the road network is covered by these roads. Average growth of the number of vehicles has been around 10.16% per annum over recent years.

Under National Highways Development Project (NHDP), work is under progress to equip national highways with at least four lanes; also there is a plan to convert some stretches of these roads to six lanes. All national highways are metalled, but very few are constructed of concrete, the most notable being the Mumbai-Pune Expressway. In recent years construction has commenced on a nationwide system of multilane highways, including the Golden Quadrilateral and North-South and East-West Corridors which link the largest cities in India.

19. Statement I: CORRECT—In 1800, some 800,000 hectares were irrigated in India. The British Raj by 1940 built significant number of canals and irrigation systems in Uttar Pradesh, Bihar, Punjab, Assam and Orissa. The Ganges Canal reached 350 miles from Haridwar to Kanpur in Uttar Pradesh.

In Assam, a jungle in 1840, by 1900 had 1.62m hectares under cultivation, especially in tea plantations. In all, the amount of irrigated land multiplied by a factor of eight. Historian David Gilmour states British colonial government had built irrigation network with Ganges canal and that, “by the end of the century the new network of canals in the Punjab” were in place.

Statement II: CORRECT—India’s irrigation covered crop area was about 22.6 million hectares in 1951, and it increased to a potential of 90 mha at the end of 1995, inclusive of canals and groundwater wells. However, the potential irrigation relies of reliable supply of electricity for water pumps and maintenance, and the net irrigated land has been considerably short.

According to 2001/2002 Agriculture census, only 58.13 million hectares of land was actually irrigated in India. The total arable
