enterprises. Private Sector Industries are owned by individual investors.

These are managed by private organisations. In capitalist countries, industries are generally owned privately. Joint Sector Industries are managed by joint stock companies or sometimes the private and public sectors together establish and manage the industries.

7. The iron and steel industry forms the base of all other industries and, therefore, it is called a basic industry. It is basic because it provides raw material for other industries such as machine tools used for further production.

   It may also be called a heavy industry because it uses large quantities of bulky raw materials and its products are also heavy. Iron is extracted from iron ore by smelting in a blast furnace with carbon (coke) and limestone. The molten iron is cooled and moulded to form pig iron which is used for converting into steel by adding strengthening materials like manganese.

8. Cotton textile industry has three sub-sectors, i.e., han- dloom, power loom and mill sectors. Handloom sector is labour-intensive and provides employment to semiskilled workers. It requires small capital investment.

   Why did Mahatma Gandhi propagate Khadi as part of the independence movement? This sector involves spinning, weaving and finishing of the fabrics. The power loom sector introduces machines and becomes less labour intensive and the volume of production increases. Cotton textile mill sector is highly capital intensive and produces fine clothes in bulk.

9. High technology, or simply high-tech, is the latest generation of manufacturing activities. It is best understood as the application of intensive research and development (R & D) efforts leading to the manufacture of products of an advanced scientific and engineering character. Professional (white collar) workers make up a large share of the total workforce.

   These highly skilled specialists greatly outnumber the actual production (blue collar) workers. Robotics on the assembly line, computer-aided design (CAD) and manufacturing, electronic controls of smelting and refining processes, and the constant
