care services means “the timely use of personal health services to achieve the best possible health outcomes”.

Factors to consider in terms of healthcare access include financial limitations (such as insurance coverage), geographic barriers (such as additional transportation costs, possibility to take paid time off of work to use such services), and personal limitations (lack of ability to communicate with healthcare providers, poor health literacy, low income). Limitations to health care services affects negatively the use of medical services, efficacy of treatments, and overall outcome (well-being, mortality rates).

Statement II: CORRECT—Health care systems are organisations established to meet the health needs of targeted populations. According to the World Health Organisation (WHO), a well-functioning health care system requires a financing mechanism, a well- trained and adequately paid workforce, reliable information on which to base decisions and policies, and well maintained health facilities to deliver quality medicines and technologies.

19. Statement I: CORRECT—Public health has been defined as “the science and art of preventing disease, prolonging life and promoting human health through organised efforts and informed choices of society, organisations, public and private, communities and individuals”. Analysing the health of a population and the threats it faces is the basis for public health. The *public* can be as small as a handful of people or as large as a village or an entire city; in the case of a pandemic it may encompass several continents.

    The concept of *health* takes into account physical, psychological and social well-being. As such, according to the World Health Organisation, it is not merely the absence of disease or infirmity.

    Public health is an interdisciplinary field. For example, epidemiology, biostatistics and management of health services are all relevant. Other important subfields include environmental health, community health, behavioural health, health economics, public policy, mental health, health education, occupational safety, gender issues in health, and sexual and reproductive health.
