considered educational. The methodology of teaching is called pedagogy.

Statement II: CORRECT—Formal education is commonly divided formally into such stages as preschool or kindergarten, primary school, secondary school and then college, university, or apprenticeship.

A right to education has been recognised by some governments and the United Nations. In most regions, education is compulsory up to a certain age. There is a movement for education reform, and in particular for evidence-based education.

17. Statement I: coRREcT—Primary (or elementary) education consists of the first five to seven years of formal, structured education. In general, primary education consists of six to eight years of schooling starting at the age of five or six, although this varies between, and sometimes within countries. Globally, around 89% of children aged 6 to 12 are enrolled in primary education, and this proportion is rising.

Under the Education for All programs driven by UNESCO, most countries have committed to achieving universal enrollment in primary education by 2015, and in many countries, it is compulsory. The division between primary and secondary education is somewhat arbitrary, but it generally occurs at about 11 or 12 years of age.

Statement II: coRREcT—Some education systems have separate middle schools, with the transition to the final stage of secondary education taking place at around the age of fourteen. Schools that provide primary education, are mostly referred to as *primary schools* or *elementary schools*. Primary schools are often subdivided into infant schools and junior school.

In India, for example, compulsory education spans over 12 years, with 8 years of elementary education, 5 years of primary schooling and three years of upper primary schooling. Various states in the republic of India provide 12 years of compulsory school education based on a national curriculum framework designed by the National Council of Educational Research and Training.
