(a) The in-site break down of rocks is known as weathering.
(b) A weathering process by which concentric sheets, slabs, sheets or flakes are successively broken loose and stripped away from a rock mass is known as exfoliation.
(c) Mechanical weathering is confined to deserts.
(d) Climate is the single most important factor influencing weathering.

12. Which one of the following statements is not correct?
(a) Most metamorphic rocks develop as a result of plate collision deep in the roots of folded mountain belts.
(b) The original material, prior to metamorphism, may be sediment, metamorphic or igneous.
(c) Gneiss is a fine grained metamorphic rock.
(d) Schist is a medium grained or coarse grained metamorphic rock.

13. Consider the following statements about the ground inversion of temperature and select the correct answer using the code that follows:
1. Ground inversion occurs during long winter nights.
2. Ground inversion occurs in cloudless clear skies.
3. Ground inversion occurs at high relative humidity.
4. Ground inversion occurs when the ground is covered with ice.

Codes:
(a) 1, 2 and 3 are correct
(b) 1, 2 and 4 are correct
(c) 1, 3 and 4 are correct
(d) 1, 2, 3 and 4 are correct

14. Consider the following statements and select the correct answer using the code given below:
1. Relative humidity increases with the decrease in temperature.
2. Relative humidity increases with the increase in temperature.
3. Relative humidity increases with the increase in water vapour in the air at constant temperature.

Codes:
(a) 1 and 2 are correct
(b) 1 and 3 are correct
(c) 2 and 3 are correct
