96. Consider the following statements:
    1. Running water is the most important agent of erosion.
    2. A river system consists of a main channel and all of the tributaries that flow into it.
    3. A river consists of collection system, transport system and dispersing system.
    4. A river system is known as drainage system.

    Consider the above statements and select the correct answer using the code given below:
    (a) 1, 2 and 3 are correct
    (b) 1, 3 and 4 are correct
    (c) 2, 3 and 4 are correct
    (d) 1, 2, 3 and 4 are correct

97. Consider the following statements and select the correct answer using the code given below:
    1. A portion of arriving energy bounces directly back into space without being converted into heat or performing any work.
    2. Earth's atmosphere and surface are heated by solar energy.
    3. The heat budget of atmosphere energy comprises of shortwave radiation inputs (ultraviolet light, visible light and near-infrared wavelengths) and long-wave radiation outputs (thermal infrared, or heat).
    4. A balance of energy input and output exists in our atmosphere.

    Codes:
    (a) 1, 2 and 3 are correct
    (b) 1, 3 and 4 are correct
    (c) 2, 3 and 4 are correct
    (d) 1, 2, 3 and 4 are correct

98. Consider the following statements about rice cultivation:
    1. In intensive subsistence rice cultivation the size of holding is small.
    2. The rice crop in this type agriculture is submerged under water.
    3. The soil depletion is minimum in intensive rice cultivation.
    4. There is a close relationship between wet rice cultivation and high population densities.

    Which of the above statement/statements is/are correct?
    (a) Only 1
