originates near Jharkhand-Chhattisgarh border and South Koel also from Jharkhand, near Lohardaga, which both rivers sourced from Chota Nagpur Plateau. Bhitarkanika National Park and Mangrove Forest lies at confluence of rivers Brahmani and Baitarni.

2. Due to poor soil quality, the growth of vegetation in tropical rainforest is good where minerals and neutrients gets vanished due to excess rains. Such type of rain forest soil are poor where nutrients are stored inside the plants. The soil of tropical rainforests are leached and devoid of nutrients. When tree cover is removed, its regeneration is difficult which replaces forest by Savanna vegetation.
3. Brent Crude is a classification of sweet light crude oil serving as benchmark price for buying oil globally. It is extracted from North Sea having 0.37% of sulphur and serving as biggest classifications of crude oil with Brent Crude, Brent Sweet Light Crude, Oseberg, Ekofisk and Forties.
4. Photosynthesis is a process used by plants to convert light energy from Sun into chemical energy which can be used as energy for organisms. Such energy is stored in carbohydrate molecules which are synthesised from carbon dioxide and water. In photosynthesis, carbon dioxide is removed from air to make plant food from carbon, thus statement 1 removes instead of adding carbon dioxide.
5. It is studied that El Nino and La Nina, both occur in equatorial Pacific Ocean where atmosphere above it change from neutral state for many seasons that appears as natural part of global climatic system. It is believed that El Niño events are linked with warming of central and eastern tropical Pacific, while La Niña events sustains cooling of areas. In case of La Nina years, trade winds are strong due to enhanced pressure gradient among eastern and western Pacific which enhanced upwelling along coast of South America. La Nina during summer season, Indian monsoon rainfall tends to appear greater as normal, in northwest India.
6. Micro irrigation is an irrigation method which conserves water and fertilizer by allowing water to drip slowly to roots, either onto soil
