2. In the map shown, Assam is not the easternmost state of India as after this, Arunachal Pradesh exists while from the map, Rajasthan is not the exact westernmost state, but from the map it is Gujarat, so this eliminates options (a), (b) and (c).So option (d) is correct as Arunachal Pradesh is easternmost point of Indian mainland while Gujarat is westernmost point of Indian mainland.

3. To answer the question, let us analyse above statements. Considering statement 1, which describes that having more nitrogen in fertilizer, there result in proliferation of nitrogen, which causes less amounts of micro-organisms in the field. With one dose of fertilizer, there result in extra nitrogen in farms, so this shows that it is incorrect which eliminates options (a) and (d).
